DETAILED ACTION

The amendment filed February 21, 2003 (Paper No. 14) has been entered. Claims 7, 12-14 are pending and being examined. Any objection and/or rejection of record that is not maintained and/or repeated in this Office action is withdrawn. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action. Citations by the examiner are in an alphanumeric format, such as "(a1)", wherein the "a" refers to the reference cited on the Notice of References Cited, PTO-892, and the "1" refers to the Paper No. to which the Notice of References Cited, PTO-892, is attached.

10 **Maintained Formal Matters, Objections, and/or Rejections:**

Claim Rejections - 35 USC § 102

Claim 7 is rejected under 35 U.S.C. 102(9) as being anticipated by Wun (u12) or Nordfang (v12).

The rejection of record is applied to claims 12-14.

15 Applicant argues that the claimed TFPI differs from that taught by Wun or Nordfang because yeast and mammalian cells glycosylate proteins differently. Applicant's arguments have been fully considered but they are not persuasive. In response to applicant's argument that the references fail to show certain features of applicant's invention, it is noted that the features upon which applicant relies (i.e., differently glycosylated TFPI or hypermannosylated TFPI) are not
20 recited in the rejected claim(s). Although the claims are interpreted in light of the specification, limitations from the specification are not read into the claims. See *In re Van Geuns*, 988 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir. 1993). Furthermore, Jenkins (Exhibit A) does not say

Art Unit: 1647

that TFPI produced in yeast is hypermannosylated. Jenkins does say that hypermannosylation is a common property of most yeast strains (page 975, right column, last full paragraph). However, inherency may not be established by probabilities or possibilities. The mere fact that a certain thing may result from a given set of circumstances is not sufficient. Jenkins is also not
5 dispositive of the number of glycosylation sites leading to hypermannosylation because hypermannosylation is the addition of a large number of mannose residues to the core oligosaccharide (Jenkins, Exhibit A, at page 975, right column, last full paragraph) and has nothing to do with the number of glycosylation sites per se.

Conclusion

10 No claims are allowable.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO
15 MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing
20 date of this final action.
